Projects

ResolveDesk (AI-Powered IT Service Desk)

June 2026 - July 2026

- Built an AI-powered IT service desk using React, Node.js, Express, MongoDB, and Socket.IO for real-time ticket management and live support chat.
- Implemented AI-assisted IT ticket triage, priority detection, automated reply drafting, escalation workflows, internal notes, and role-based dashboards.
- Worked with MongoDB for the first time and learned how to design collections, store data, perform CRUD operations, and connect it with the backend.
- Repository Link: <https://github.com/Ankit-2607/ResolveDesk>

My Digital Library

Feb 2026 – May 2026

- Built a Library Management System using Core Java to manage books and users without using a database.
- Used Java File I/O and Serialization to save and load data, so records are available even after restarting the application.
- Applied Object-Oriented Programming (OOP) concepts like Encapsulation, Inheritance, and Abstraction to write clean and organized code.
- Organized the project into different modules to make it easier to understand, maintain, and update.
- Optimized the application to handle a large number of book and user records efficiently.
- Repository Link: <https://github.com/Ankit-2607/E-library-application>

Portfolio Website

Oct 2025 – Nov 2025

- Created a personal portfolio website to showcase projects, skills, and achievements with responsive design.
- Implemented smooth scrolling, animations, and contact form functionality for better user interaction.
- Gained experience in responsive design, UI/UX structuring, and front-end development.
- Repository: github.com/Ankit-2607/My_portfolio
